Question 3. Do you fancy (do) _____ a project on the traditional costumes of the Ede ethnic minority group?

III. Read the following passage and answer the questions. (0.8 pt)

3D printing technology was introduced in the 1980s and has evolved significantly ever since. A 3D printer turns a whole object into thousands of tiny little layers, then makes it from the bottom-up in layers of material. There are many applications of these printers. For example, they are used to create medical implants, household items, and fashion accessories.

One of the major advantages of 3D printers is that they make use of different kinds of materials like plastic, metal, or food ingredients. Therefore, by using 3D printers, people can reduce material waste. In addition, they can create complex and customised objects that traditional manufacturing methods cannot produce.

However, there are some drawbacks to consider. 3D printing can be time-consuming, especially for large or tiny objects. Also, the cost of purchasing and maintaining a 3D printer can be relatively high. The quality of the printed objects may vary depending on the type of printer and materials used. Certain materials used in 3D printing, such as plastics, may not be as durable as those produced through traditional manufacturing methods.

Despite these drawbacks, 3D printing continues to expand its applications. With ongoing advancements, it opens the door to even greater innovation and creativity.

Question 1. When was 3D printing technology introduced?

Question 2. What can people reduce by using 3D printers?

Question 3. Why may the quality of a 3D-printed object vary?

Question 4. What does the pronoun it in the last paragraph refer to?

IV. Finish the second sentence in the way that has the same meaning as the first one in each of the following questions. (0.6 pt)

Question 1. I don't have a three-month summer holiday as my grandma did.

→ I wish _____
